

RECOMMENDED PRODUCT MAINTENANCE

Proper maintenance is essential to keep wood floors looking beautiful and performing well for the lifetime of the floor.

Routine cleaning involves sweeping, dust mopping, or vacuuming using the bare floor setting to remove dust and dirt. Clean spills immediately with a dry or slightly damp cloth. Don't use wet mops or steam mops, which will damage the finish and the wood over long periods of time.

To best protect your investment, it's recommended to establish a cleaning routine and take measures to prevent everyday wear and tear.
